Professional Summary

Frontend Engineer with 4+ years of experience building production-grade enterprise SaaS applications. Core contributor (800+ commits) to Nexl, a \$23M Series B-funded AI-powered growth platform used by leading global law firms. Built full product features end-to-end including form builders, calendar views, reporting dashboards, internationalisation across an entire platform, design system components, and CRM data management tools. Experienced in React, TypeScript, GraphQL, and working in distributed remote teams.

Technical Skills

Frontend: React • Next.js • TypeScript • JavaScript (ES6+) • HTML5 • CSS3 • Tailwind CSS • Material UI • Syncfusion • AG Grid

Data & APIs: GraphQL • REST APIs • Async data handling • Formik / Form validation

Tooling & Quality: Git & GitHub • Cypress • Jest • Vitest • React Testing Library • Storybook • CI/CD • Feature flags

Specialisations: i18n / Localisation • Design system development • Responsive UI • Accessibility

Full-Stack: Node.js • MongoDB • Prisma ORM • Sanity CMS • Vercel • Resend • Docker (operational)

Professional Experience

Frontend Engineer

Nexl | AI-Powered Growth Platform for Law Firms | Jul 2022 – Feb 2026 (3.5 years)

Remote (Australia) | Series B (\$23M) | Enterprise SaaS serving global law firms | React + TypeScript + GraphQL

- Joined as one of the earliest frontend engineers (team of 2), contributed 800+ commits over 3.5 years, and helped scale the frontend team to 10–12 developers as the platform grew through Series B funding
- Architected and built the Workspace Folders system end-to-end, including nested folder creation, drag-and-drop reordering, move-to operations, search, and project/app organisation, replacing a flat list with a hierarchical navigation structure
- Built a complete Form Builder feature enabling law firms to create custom data collection forms with configurable fields, required/hidden field controls, responsive preview, submission confirmation pages, and contact list integration
- Developed Calendar Views using Syncfusion across contacts, companies, generic lists, and project lists, including shareable links and read-only modes. Evaluated multiple component libraries and selected the optimal solution; work recognised by the CEO in a company-wide meeting
- Built the Reports section from the ground up, including reports listing page, detail views, fuzzy search, and role-based view permissions for law firm leadership to track business development performance
- Led the full internationalisation (i18n) effort, implementing French language support across the entire web application and Outlook add-in, including D3 chart locale formatting, date localisation, and pluralisation handling
- Created the Industry Mapper module for CRM data quality, including industry listing, bulk mapping to internal industries, filtering, and pagination, enabling firms to standardise their contact categorisation
- Built the Data Cleaner tools for managing incomplete, archived, and bounced contacts/companies, including company merging functionality and data validation workflows
- Designed and implemented the Shareable Links system across list, board, and calendar views with read-only access modes, saved filter configurations, and permission controls
- Implemented a comprehensive role-based permission system controlling export access, edit capabilities, and feature visibility across contacts, companies, opportunities, campaigns, and lists
- Contributed to the platform's design system migration, building reusable components with Storybook documentation and migrating existing UI across multiple product areas
- Built the List Reminders system (contact and generic lists) with create, update, dismiss, and notification workflows and redesigned the Key Activities UI from a flat list to an interactive timeline view
- Worked extensively across CRM core features: opportunities board views with custom statuses and drag-and-drop, contact/company management, activity feeds, key activity filtering, AG Grid inline editing, contact syncing with Outlook, and hundreds of cross-codebase bug fixes and performance improvements

Frontend Developer

Joblify Connect | Jul 2021 – Jul 2022 (1 year)

Remote (South Africa) | React + Next.js + TypeScript

- Maintained and enhanced the Joblify Connect Admin Portal using React, implementing user feedback to improve functionality for 50+ active users
- Developed dynamic UI features with React, Next.js, and TypeScript, improving application performance and user experience
- Integrated a WhatsApp chatbot system and third-party services, contributing to a 25% increase in user interactions on the web application
- Collaborated with backend teams to support internal workflows and improved the usability and reliability of operational tools

Education & Certifications

Associate's Degree, Mathematics & Computer Science | Saylor Academy | 2022 – 2024

Frontend Development Program | freeCodeCamp | 2020 – 2021

Certifications: React: The Complete Guide (Udemy) • Front End Development Libraries (freeCodeCamp) • JavaScript Algorithms & Data Structures (freeCodeCamp) • Responsive Web Design (freeCodeCamp)
